

Amna Mubashar

Full-Stack Mobile Engineer | iOS • Flutter • Supabase • AI-Enabled Product Development

Lahore, Pakistan — Open to Remote • [linkedin.com/in/amna-mubashar](https://www.linkedin.com/in/amna-mubashar) • github.com/Amna29Mubashar

SUMMARY

Full-stack mobile engineer and product founder with 5+ years shipping production apps across iOS (Swift, SwiftUI, UIKit) and Flutter, backed by Supabase/PostgreSQL. Experience spans end-to-end ownership — product design, backend architecture, AI-powered features, and payments — from enterprise healthcare and event-management apps to founding and building a mobile product studio. Comfortable operating as a one-person full-stack team: designing in Figma, building the backend in Supabase, shipping the client in Flutter or Swift, and using AI coding tools to move fast without cutting corners.

CORE SKILLS

Languages: Swift, Dart, Objective-C, SQL

Mobile: SwiftUI, UIKit, Flutter, Combine, MVVM, MVC, SOLID, Offline-First Architecture, Multithreading

Backend & Cloud: Supabase, PostgreSQL, Firebase, RESTful APIs, Realm, CoreData, AWS, Amplify

AI & Automation: AI-assisted development (Claude Code and similar tools), AI/LLM feature integration, AI-powered content curation & generation

Payments & Infra: Stripe SDK, RevenueCat, Payment Terminal Integration, Ledger/Escrow-style Payment Flows, CI/CD, TestFlight, Firebase App Distribution, Datadog, CloudWatch

Product & Design: End-to-End Product Design, Figma, UX/UI Design, Roadmapping, Team Leadership

Tools: Git, Jira, Bitbucket, GitLab, Agile/Scrum

EXPERIENCE

Founder & Chief Product Officer — UV Apps (Product Studio), Remote 2025 – Present

- Founded and led product, design, and full-stack engineering for a mobile product studio, taking multiple apps from concept through App/Play Store launch using Flutter and Supabase.
- Built Re-wear, a peer-to-peer resale and rental marketplace where users list their own “closet” — clothing, jewelry, and shoes — to sell or rent to other users.
- Architected a conflict-safe rental booking system on PostgreSQL using date-range exclusion constraints to guarantee zero double-bookings under concurrent requests.
- Designed an append-only financial ledger to track payments, security deposits, and payouts with full auditability.
- Built an AI-powered photo curation app: users upload trip/shoot photos and describe the context, and the app selects the best shots, auto-edits them, writes captions, and assembles ready-to-post carousels/collages in an optimized sequence.
- Shipped multiple hyper-casual games end-to-end, from concept and gameplay design through release.
- Led a small cross-functional team of designers and developers, setting product direction and owning delivery.
- Used AI coding assistants (e.g., Claude Code) throughout the build process to accelerate full-stack delivery without sacrificing code quality.

Senior iOS Developer — Devsinc, USA Jun 2022 – 2025

- Led iOS development across multiple client products — including ExpoPass, HealHub, and Maple HR (see Projects) — owning architecture, offline sync systems, and payments end-to-end.
- Integrated Stripe SDK and in-app payment terminal flows for secure checkout experiences.
- Produced clean, well-documented code, consistently meeting deadlines and improving client satisfaction.

iOS Developer — Devsinc, USA May 2021 – Jun 2022

- Delivered iOS applications using Swift and Xcode with a focus on scalable, maintainable architecture.
- Built responsive UI with UIKit and programmatic layouts; debugged and resolved issues to ensure smooth functionality.
- Partnered directly with clients and team members to deliver high-quality solutions on time.

Software Engineer — Fiverr, Remote Jan 2019 – Apr 2021

- Developed iOS applications using Swift and Objective-C for freelance clients, ensuring optimal performance.
- Built UI components programmatically with UIKit; debugged and troubleshooted issues alongside senior developers.

- Collaborated on code reviews and maintained/updated app features based on client feedback.

PROJECTS

Schedule-Master — Scheduling & Availability App (iOS) ([App Store](#))

A streamlined scheduling app that helps users efficiently organize meetings, manage availability, and stay on top of appointments with a clean, intuitive interface.

Expo Pass — Event Management App (iOS) ([App Store](#))

- Built and maintained a large-scale offline-first iOS app for international events with tens of thousands of attendees, ensuring reliability in low/no-connectivity conditions.
- Designed a Realm-based persistence and sync system with Operation Queues, enabling background sync, local-first UI updates, and optimized APIs through batching for peak traffic.
- Migrated networking to a custom URLSession layer using Codable for better performance; implemented QR scanning and badge generation for event check-in and access control.

Leaf: Voice Recorder & Journal — Voice Journaling App (iOS) ([App Store](#))

A private voice journaling app that lets users capture, organize, and securely store meaningful audio memories like stories, thoughts, and voicemails with simple, one-tap recording.

Ascended: Fitness Adventure — RPG Fitness Game (iOS) ([App Store](#))

An RPG fitness game that turns real-world workouts into character progression — users create a custom hero, complete story-driven missions in the fantasy world of Arcadia, and level up through Apple Health-synced training, unlocking hero paths, gear, and faction lore.

HealHub — Health & Wellness App (iOS, Swift/SwiftUI)

- Designed and built the app from concept to App Store release; architected a scalable MVVM + SOLID codebase.
- Built a dual-circle symptom selector with dynamic geometry and backend-driven data, plus an AI-powered symptom search that scans both wheels, scrolls to matches, and prompts to temporarily add missing symptoms.
- Built a multi-part video recording feature with AVFoundation, including countdown, segment recording, trim/redo editing, and backend upload.

Maple HR — Enterprise HR App (iOS)

- Built and optimized the Maple HR iOS app, consolidating employee, manager, and team-lead workflows into a single dashboard.
- Automated manual processes to reduce paperwork and improve efficiency across HR functions.

EDUCATION

National University of Computer and Emerging Sciences — Bachelor of Computer Science, Major in Computer Science
